

now offering **24x7**
home monitoring...

Nightingale Home Healthcare exclusively offers the HomMed Monitoring System. This monitor records blood pressure, heart rate, weight, temperature, oxygen saturation, and if needed blood sugar, PT/INR and spirometry.

A simple, cost-effective way to monitor people with chronic illnesses within the comfort of their own homes.

The system has two components: a monitor (which is similar to the ones used in hospitals and ER) that collects and transmits data from the patient and a central station that receives this data for analysis by health care professionals in the office of Nightingale Home Healthcare.

If a patient's measurements fall outside desired limits, the central station alerts the monitoring personnel and appropriate actions are taken to ensure the well being of the client at home.

You can feel safe and secure in the comfort of your own home **without losing your independence.**

WE BELIEVE:

A Customer is the most important visitor on our premises.

He is not dependent on us.

We are dependent on him.

He is not an interruption on our work.

He is the purpose of it.

He is not an outsider on our business.

He is part of it.

We are not doing him a favour by serving him.

He is doing us a favour by giving us an opportunity to do so.

... Mahatma Gandhi
