

Top Ten Reasons For *Home Health Care*

1. **Prevents or postpones institutionalization** – Staying in the home gives peace of mind that in turn promotes health, healing and happiness, which all work together to form a stronger body.
2. **Maintains independence** – No one is ever ready to give up independence. Facilitating a loved one to stay at home allows him/her the dignity they have earned.
3. **Reduces stress for patient and family** – Living at home eliminates worrying whether or not you have placed a loved one in a secure environment.
4. **Promotes healing** – Improvement from an illness or stroke just seems to go faster when you are in familiar surroundings. Nothing beats resting on our own bed and pillow.
5. **Personalized care** – Each patient receives an individualized care plan that addresses every need from nursing care to therapy.
6. **Addresses safety issues** – Home care professionals evaluate the home setting for safety concerns...rugs that may cause falls, bathing situations and more.
7. **Compassionate care** – Medical professionals undergo scrutinizing background checks so you can be confident of your caregiver's credentials.
8. **Improves quality of life** – Statistics prove that living at home speeds recuperation and adds longevity to life.
9. **Less health care costs** – Although insurance pays some on hospital stays, much of the soaring costs is not covered...depleting fixed incomes even more.
10. **Medicare approved** – Financial professionals will work with your insurance to insure that you receive the best care while staying in your home.
